

Promotes Skin Collagen  
Renewal & Repair

Supports Pain Management  
Associated with Joint Disease

Promotes Fibroblast Activity  
for Skin Elasticity

Decreases Skin & Body  
Inflammation

Increases Joint Mobility

## 100% Hydrolyzed Avian Eggshell Membrane. Clinically Proven Effective.

Collagen Types I, V, X, HEM™ are powerful compounds found in eggshell membrane accounting for 15% to 20% of the total Collagen. Eggshell membrane contains about 100 parts of Type I Collagen to 1 part Type V Collagen and contains the rare Type X Collagen.

Type I Collagen is very important in bone and skin development and maintenance, Type V Collagen is required for assimilation of Type I, while Type X Collagen protects the embryo and other important tissues.

## Effectiveness of H.E.M. for Moderate to Severe Pain.

kollaGen I.V.X.HEM™ Hydrolysate is the result of more than a quarter of a Century of Collagen food supplement research.

A dosage of 500 mg taken once per day demonstrates that kollaGen I.V.X.HEM™ is a practical treatment option for the overall management of Joint and Connective Tissue Disease, Symptoms and related superfluous side effects.

The study also showed a normalizing of saliva pH levels which is often indicative of a reduction in inflammation.
